

Badcock System

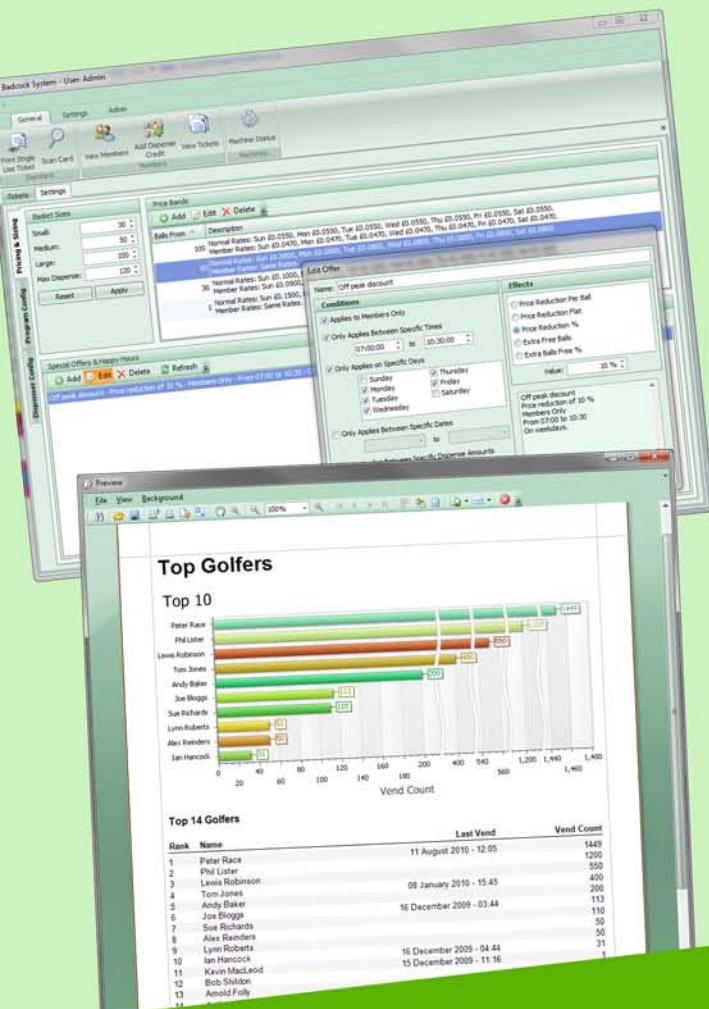

Golf Ball Dispenser Management

Features

- Utilises contactless card technology for regular customers with a simple 'top-up' credit system.
- Tickets containing single use PIN codes can be produced for one-off dispenses.
- Incorporates a detailed reporting system to monitor cash flow and vend activity, even down to specific members or system users.
- Features user activity tracking to add a level of transparency to the actions of staff members.
- Monitors ball levels in dispensers and refills are tracked as they happen.
- Custom pricing bands can be set and combined with 3 configurable baskets sizes.
- Support for golf pros with unlimited use cards and usage monitoring.
- Special offers consisting of multiple conditions and effects allow for tight control over pricing.

Benefits

- Centralised database store which all dispensers connect to.
- Contactless cards do not wear out or degrade with use and can be reused.
- Credit levels and member data is stored within the system, not on the member cards. So having a customer lose their card does not result in a loss of credit or breach of privacy as the lost card can be invalidated within the system by a member of staff, rendering it worthless.
- Detailed reporting and logging minimises the risk of theft or misconduct from going unnoticed and adds a degree of accountability to sales staff.
- Features a high visibility all-weather VFD display for giving clear step-by-step instructions for dispenser usage.
- Integrated backup and restore system to simplify off-site backups to protect against data loss due to fire or theft.
